

Customs: serve your customers without borders.

Accelerate the declaration process with Boltrics' custom software.

The international demand for fast delivery of goods is growing, making logistics service providers facing major challenges. Prevent incorrect data entry, minimize administrative actions and enhance your competitiveness by automating your customs processes with one integrated solution.

While forwarding goods cross-border, you want to unburden your customers. So, there should be no doubt about the completeness and accuracy of the required documents. With Boltrics' customs software – supporting all customs flows in- and outside Europe – you have the knowledge to meet different formalities.

Transform
business practices

Optimize processes to enhance your competitiveness to stay ahead.

Optimize products and
services

Collect and analyze your data to better understand your customers and adapt your services to their needs.

Safeguard your
business

Rely on the choice of peers and make use of Boltrics intelligent, secure (cloud) solutions.

Streamline your custom processes with Boltrics' software

AGS (NL) and PLDA (BE)

Enter directly from the WMS, an import or export declaration in AGS for the Netherlands or PLDA for Belgium. Efficient and reliable. At a glance, you have an overview whether the declaration is complete. The applicable import duties and VAT are automatically updated in the declaration and the WMS documents, and therefore on the invoice. In addition, shipping documents are automatically prepared.

GDB (nVWA)

Animal-derived products or live animals that enter the EU must be reported to the nVWA. Via our WMS software you can make direct (GDB) pre-registrations to the nVWA, and you can be kept up-to-speed with the checks being made.

NCTS

Signing out T1 documents has never been easier: fully integrated into the WMS process. The check on "unloading permission" goes hand in hand with your goods in process, making sure no containers will be opened unauthorized. The layout of a T1 for Departure is also incorporated into the WMS process, including checks on going out.

EMCS

Via the Excise Movement and Control System (EMCS) you make a direct disclosure (electronic administrative document) via the WMS of movements of excisable goods under excise duty. The notifications to EMCS, like NCTS, are fully integrated into the WMS process.

DGVS

Communicatie transportation movements on and around Schiphol to DGVS (Documentless Goods Follow System) without physical documents via the Cargonaut platform. Manual messages are no longer needed: your DGVS stock will always match your WMS inventory.

Portbase

Portbase is the digital hub for the Dutch Ports of Rotterdam and Amsterdam, where many information flows come together. Your export and import preloads in the Portbase system are part of the WMS process.

APCS & TUL

Communication with the port of Antwerp and the PSA terminal for logistics runs directly and integrated with the WMS process.

"Our solution is built on standard Navision technology, without customization, so we can join seamlessly along with upgrades in the future, so no problem anymore with outdated legacy software."

Brennus van der Klaauw, Managing Director at VCK Group

Our solution

Knowing that logistics service providers independently try to reinvent the wheel, inspired Boltrics to develop a branch standard. One solution that the entire branch puts its weight behind. A proven standard, always state-of-the-art solution – thanks to the development power of Microsoft Dynamics NAV. Fast, lean and decisively implemented by Boltrics, exactly according to plan. Without time-consuming customization.
