

App Platform

All your stocks, processes and planning in one hand.

Efficiency and communication are among the most important pillars in logistics. Your customers always want the fastest solution and correct information. With increasing workloads and stricter customer demands, this is not always possible. You also have your own core tasks. But what if they could take certain steps themselves? What if they do not have to pass on their preferences, but register them by themselves? Then you would increase your efficiency and information possibilities in one go.

With Boltrics App Platform, it does not have to stay with "what if". By giving your logistic partners access to a selective part of your processes, all parties can act on what suits them best. You set the parameters and the rest will follow.

Not just an application

The App Platform is one application center for all of your mobile devices. This module offers countless possibilities to both your company, your clients and customers. Make inventory reservations, timeslot bookings, verifications, and much more. No customization, but a complete platform for all your logistics processes. And therefore non-stop in development. Just like you are used to from Boltrics.

Always up-to-date with the latest technology

This platform is – like our other products – developed as a standard industry product. Based on our customers' input. We ensure that the connections are updated with each update and new items are added generically. This way, everyone benefits from each other's knowledge and you can always use the latest features.

Always and everywhere access for everyone on every device

With Boltrics' App Platform you are not the only one that has access to your logistic processes. Also your clients can, only if you allow this, get access to your system. This way they can, for example, book timeslots and drivers, or reserve stocks. You decide the degree of control and thus keep everything within your hand. Despite the device you are using at that moment.

Save a lot of time with real-time Dynamics integration

No more paper forms. No Excel files that you need to integrate (manually) in your system. Forget time-consuming administrative activities. Everything you do in the App Platform is directly connected to your system. This way you will never do double work.

Proof of Deliveries instantly in your system

Has your driver arrived at the desired destination and did everything arrive in good order? Good, all he has to do next is confirm a POD via the app and it is immediately processed in your system and all parties get informed accordingly.

Increase the efficiency of your warehouse employees

More and more logistics service providers are working with smartphones in their warehouses. The ease of use, the familiar interface and the large screens considerably increase the efficiency of the warehouse employees. With the App Platform you can scan via HTML5 directly from the browser, with any device.

Facilitate and accelerate quality checks

Another advantage of HTML5 Scanning via the App Platform comes forward at quality checks. By working with drop-down menus and being able to add photos to a damage form, you save time. The employee checks the shipment, takes a picture, immediately adds it to the system and finishes the quality check. Nobody at the office needs to be disturbed in this process.

Prevent unnecessary costs and only pay for what you use

Forget about complex price agreements. Simply select the subscription with the expected number of transactions and pay one amount per month. Down- or upgrade when you expect a change in transactions. You only pay for the processes that are designed for you. Simple and clear.

All benefits together

- All registration from one application
- Accessible everywhere on all devices
- Always up-to-date technology
- Improve your customer focus
- Increase your employees' efficiency
- Clear pricing

Our solution

Knowing that logistics service providers independently try to reinvent the wheel, inspired Boltrics to develop a branch standard. One solution that the entire branch puts its weight behind. A proven standard, always state-of-the-art solution – thanks to the development power of Microsoft Dynamics 365 Business Central. Fast, lean and decisively implemented by Boltrics, exactly according to plan. Without time-consuming customization.
