

Road transport

Always going in the right direction with the correct overview and tight planning.

In a business where only speed and efficiency matter, keeping an overview is not easily done. At the same time, these two pillars cause your margins to shrink. Shockingly, some assignments are loss-making instead of profitable. This emphasizes the need for efficient transport. You want to schedule the shipments of your customers so that they arrive at the destination at low cost in a good condition. Without having to compromise your service standards. Is this all realistic? Or is it too much to take into account?

With Boltrics' road transport software you support all activities of third-party logistics (3PL). Our solution has been developed with input from the entire industry. This way you are assured of all relevant functionalities for you as a transporter. Keep an overview of your costs and benefits, set agreements in detail and book an efficiency win by digitalization and automation. Enjoy all features and take full advantage of the emerging market.

Road transport software for everyone

Boltrics' software has been developed specifically for logistics service providers and therefore offers solutions for all types of transporters. Whether you offer transport for third parties with your own trucks or outsource everything to carriers: the extensive features in our software will help you on your way.

Manage orders from request to invoicing

Successful transporters make the difference in efficiency. And in your field you can book a lot of efficiency in the order process. In Boltrics' TMS you easily define and manage transport orders until they are invoiced. One-time entry, because planners, drivers and customers (via the customer portal) have access to the same information. No more double or incorrect entries and no more back and forth phone calls.

Make the most out of your driven miles

Another very important aspect of efficient transport is the optimal use of your resources. You do not want drivers to wait unnecessarily or trucks leaving your premises half full. In our TMS you can quickly and easily set up the loose transport orders. Register, for example, individual bookings for each destination and then link them as partial shipments to a container file. The software takes the total weight and size of the partial shipments into account. You then compile this into one ride and link it to a truck, trailer or driver.

Generate and send documents automatically

Have you entered the orders and rides correctly? If all data in the TMS is correct, the required documents are required automatically. Think about a CMR, loading list, ride tickets and a manifesto. But also the required customs documents. Do you want to inform your partners immediately? You can easily automate the sending of the (digital) documents if you wish.

Exchange data between cross-dock depots

Working fast and efficiently is not always easy. This requires continuous information exchange between cross-dock depots and trucks, but non-stop calling each other is not necessarily efficient. With Boltrics' TMS you can realize fast and reliable exchange between these parties, making smart planning of shipments much easier.

Whatever you transport, our software rides along

Do you feel like a road transporter? Then you do not have to doubt whether our software offers solutions to your problems. Do you transport Less Than Load (LTL) with groupage? Or Full Load Trucks (FTL) for multiple clients? Or maybe you commit yourself to one customer and you solely drive around for this party. In all these cases you have come to the right place at Boltrics.

Set tariff agreements in detail at customer level

Do you sometimes lose an overview of all agreements you have made with your customers? Or do you have to dig through thick files to find the deal? With TMS Contracts you set up tariff agreements in the system. If a customer places an order, the system automatically connects the right agreements to that specific order. With one push on the button you generate a quotation and the order is accepted in the system.

Save loads of time with automatic invoicing

All of the beforementioned makes the following course of events possible. A driver delivers the goods to your customers on time. After unloading the truck, the customer approves the load and the Proof of Delivery. He does this by putting his signature in the mobile application of the driver. This is directly linked to the TMS, so that the tariff agreements with that customer are brought forward. In this way an invoice is automatically created and sent to the customer. The extent to which you apply human checks to this process is completely up to you.

Keep a clear overview with graphical planning

Your planners are of great importance for the success of your transport company. They plan the trips as efficiently as possible, so that you make optimum use of the available resources. With Boltrics' graphical planning board, in collaboration with DIME.Scheduler, you facilitate this task for your planners. By visualizing the trips they know which cargo is where and whether it runs according to schedule. With this overview they know exactly where bottlenecks arise and where you actually achieve successes.

Make optimum use of available resources

In the current transport landscape, where staff is scarce, you must make efficient use of the available resources. In addition, the pressing margins also force you in this direction. With resource management, you register all your trucks and drivers in your TMS and therefore improve your insight. This way you know for example when a truck needs maintenance, an employee's driver's license expires, or how much fuel has been used in a job.

Explore every journey with complete traceability

If there is something wrong with a truckload, you want to know in detail what happened to it. Where has it been? Who transported it? And for the food industry: when and by whom was it produced? With Boltrics' solution, where barcodes are often the basis, you always know exactly where articles are and where they have been. This way you can always inform your customers and clients correctly.

The most advantageous outsourcing of services

Do you (partially) outsource your transport orders? No problem. Because our software effortlessly supports processes, such as buying and selling transport services. Or forwarding- and expeditor-services as you like. Does it turn out that relying on an external transporter is cheaper? With the supplier comparison in your TMS, choosing the most advantageous option is done in no time. By also keeping surcharges in mind, you will not be surprised. Not even in hindsight.

Matching purchases and transport orders

Naturally, you like to keep control over your costs. Therefore, our software offers you to besides managing your logistics activities, a way to manage your finances as well. Directly match incoming invoices with the agreements made during the logistics trajectory. This way it becomes really easy to outsource rides and enlarge your margins. If desired, this process can become entirely automated with our Document Capture module. This helps you digitally save your documents and purchase invoices are automatically created and matched.

All information insightful for your customer

Save time and improve your information provision towards your customers at the same time with our web portal. With Boltrics' customer portal, your customers have 24/7 access to all the information you want to show them. They do not have to call you for questions, but they have access to online real-time datasets. Does your customer prefer update e-mails? Check. Because with our software you can automatically send notifications, including relevant documents attached. Do you want to go one step further in automating the process? Then directly communicate the latest status with your customer's system via data integration. This possibly saves you discussions afterwards.

All benefits together

- Transport management for own and external carriers
- Manage orders from request to invoicing
- Optimum utilization of driven miles
- Very efficient use of cross docks
- All your resources managed transparently
- Set detailed tariff agreements at customer level
- Automated processes from an order to invoice
- Visualize your profit with graphical planning
- Send customs documents automatically
- Always up-to-date software

Our solution

Knowing that logistics service providers independently try to reinvent the wheel, inspired Boltrics to develop a branch standard. One solution that the entire branch puts its weight behind. A proven standard, always state-of-the-art solution – thanks to the development power of Microsoft Dynamics 365 Business Central. Fast, lean and decisively implemented by Boltrics, exactly according to plan. Without time-consuming customization.
